Skills to help us Understand Users, Content, and Context (Louis Rosenfeld, Jess McMullin)

Diagram below:

**IA Areas of Practice**

Users + Context + Content = IA

Professional Development?
Balance your strengths by exploring other areas....

We all come from a background that fits into one of these areas. For example, you might have a background in technical communications and therefore may feel very comfortable working with content. Or you might have an MBA and feel especially strong about your skills in the business context area. I suggest taking one of these “majors” and complementing it with a “minor” in one or two of the other areas. So if you’re that MBA, consider boning up on ethnography or UI to address gaps you may feel in your understanding of users.

http://www.louisholsonfeld.com

Of course there’s overlap in these skills and roles. Where does card sorting fit in - under Users or Content? The important thing to remember is that we’re a multi-faceted bunch, and that it’s a rewarding experience to explore outside your own area of expertise as you develop your career.

**Users**

- who they are, what their information-seeking behaviors and needs are

**Skills and Roles**

- Contextual Inquiry
- Interviews
- Ethnography
- Task Analysis
- Usability Testing
- Usability Inspection
- Articulating User Needs
- Documenting User Experience Requirements

**Content**

- volume, formats, metadata, structure, organization

**Skills and Roles**

- Indexing & Cataloging
- XML and Metadata
- Thesaurus Development
- Site Architecture
- Writing
- Content Management
- Navigation and Labeling

**Context**

- business model, business value, politics, culture, resources and resource constraints

**Skills and Roles**

- Definition: Business Needs
- Project Management
- Project Scope and Definition
- Business Analysis
- Systems Analysis
- ROI Calculation
- Managing Client Expectations
- Technical Constraints
